Visualizing Music

Visualizing Music

The visualizing music course is designed to work with developing student's understanding between the connection of music and visual arts. Students will concentrate on many genres of music and determine what visual/artistic elements can be applied to the mood, tone, tempo Etc. of each piece. Each project will entail listening and interpreting on a personal level the different qualities of a musical piece in addition to creating a visual connection

between the two. Students will also focus on understanding their own work through group discussions and in class critiques. (Recommended for ages 15 and older).
